

Job vacancy

Senior Clinical Engineer (m/f/d)

Attention Data Crunchers!

Are you motivated to apply your engineering and data science skills to a new, innovative brain-monitoring technology and generate real-world impact for patients in critical conditions?

Job Description:

We're looking for an open-minded and creative team player to join our Biosignal AI experts. Our ideal candidate has previous experience working in a Medtech company and has a deep understanding of biosignals and systems engineering.

What do we expect?

- A highly motivated team player who can think out of the box
- At least two years industry experience with physiological time-series data (e.g. ECG, Blood pressure, etc.)
- Basic knowledge about the physiology of the cardiovascular system
- Deep understanding of systems engineering
- At least two years of programming experience in Python and Gitlab
- Master/ diploma/ PhD in Biomedical engineering, medical informatics or related fields
- work at our office in Leipzig

What can you expect from us?

- Joining a highly motivated, interdisciplinary team of experts in Biosignal and physiological data analysis
- Being part of the development of a technology that generates real-world impact for patients in critical conditions
- Working closely together with neurosurgeons and clinical experts
- Staying healthy at work with our company bikes

Please send your application with certificates, references, etc. preferably as a PDF in one document to: bewerbung@sonovum.de

We look forward to receiving your informative applications including availability and salary expectations.
